- NPM (Node Package Manager)
- Experienced with Graphic Design Applications
- API management
- Digital Marketing
- Eagerness to learn
- Logical approach to work
- Ability to work in a highly technical environment
- Can do attitude

## SKILLS SUMMARY

### Problem-Solving

While working for Jono Decorators Limited as a Web Developer and UX Designer I learned how to deal with technical issues and help to suggest design requirements for the brand and website. He wanted to add a WhatsApp panel where customers could contact him straight away which was having some issues when redirecting, so I Fixed it, managing some code in the contact form as well, having a quicker response and call to action. Also developed media queries for all devices including Desktop, tablets, and smartphones.

### Team Player

Developed a website to showcase students' work for Yoobee Colleges, working with 5 developers at a fast pace, managing git branches and pull requests, we all had our duties and gave feedback to each other to prevent bugs and accelerate the production process. My role was to design the Landing page incorporating animations and responsiveness. I used mainly HTML, CSS & JS for the project.

### Drive, Motivation, and Adaptability

While Working at Data torque as a Software Developer I had to learn their platform and software and also fix some bugs that were checked and accepted by senior devs. It was great to understand the production process and learn new ways to create solutions. Had to learn new languages such as C# and developed more others like SQL. It was such a good environment to learn and adapt to help with the development of other apps, and it motivated me to carry on doing some UI and Integration tests.

### User Experience

While working as a freelancer, I have developed a knowledge of user experience and this is one of my main priorities when working for clients. As this will cause a huge impact on the brand and user loyalty. In one of my projects, I had to re-design a website for Mastertouch a website that was first coded with the platform Wix, after a few weeks of working on this website I managed to fully change its look and gave it a more flashy, modern and intuitive design. Where It is easier for the user to navigate throughout the site and to recognize what's the brand about in a few clicks.

## WORK EXPERIENCE

**Jono Decorators LTD**  
Freelancing

**Software Developer**  
Wellington
